

DECENTRALIZED SYSTEMS

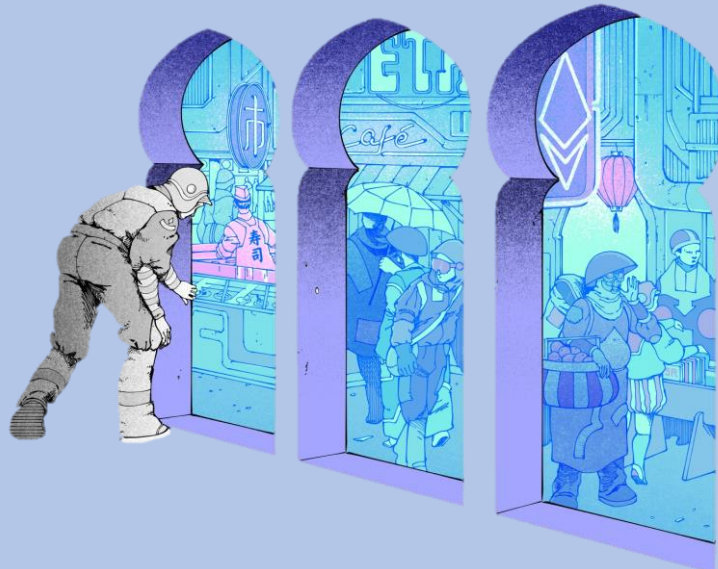

Using Blockchain.

MASOOD AHMED MOHIUDDIN

“Blockchain is the biggest opportunity set we can think of over the next decade or so.”

-Bob Greifeld, Nasdaq Chief Executive

Decentralization refers to the transfer of control and decision-making from a centralized entity.

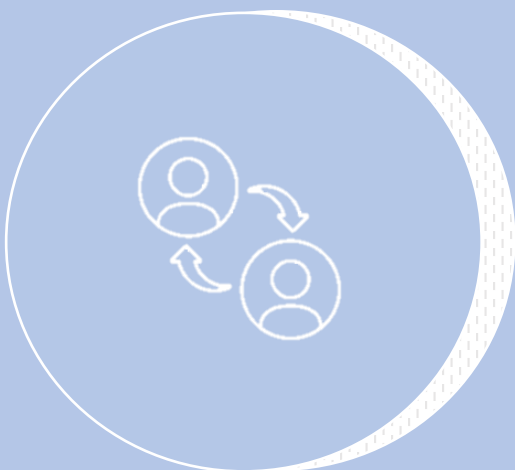

A blockchain is a distributed database that is shared among the nodes of a computer network.

uptravel

In this upscaling world of technology with blockchain-powered universe taking rapid changes, we posit that decentralization plays a major role in ensuring protection of private data and security. Keeping in mind about this global network, we present you the idea of our project "uptravel"

uptravel is an integral part of our lives, we commute from one place to another using a wide variety of transport systems. One of the most convenient ways of travelling, renting a mobility service i.e. taxi/cabs. uptravel is one of a kind.

uptravel is a global network for peer-to-peer connection and commerce. uptravel being a Dapp which utilizes the Ethereum blockchain all around the world to connect drivers and riders together without a third medium.

General Explanation

uptravel provides clear benefits over the traditional mobility services. Traditional mobility services charge about 25% of commission from the payment to run their platforms. With Secret Station, the driver only pays for the Secret Station's community and its running fee. (Around 10%)

uptravel integrated with google maps could provide its service to every corner in any locality around the world. Plus, with Blockchain, the Dapps we create would improve Transaction visibility and User onboarding.

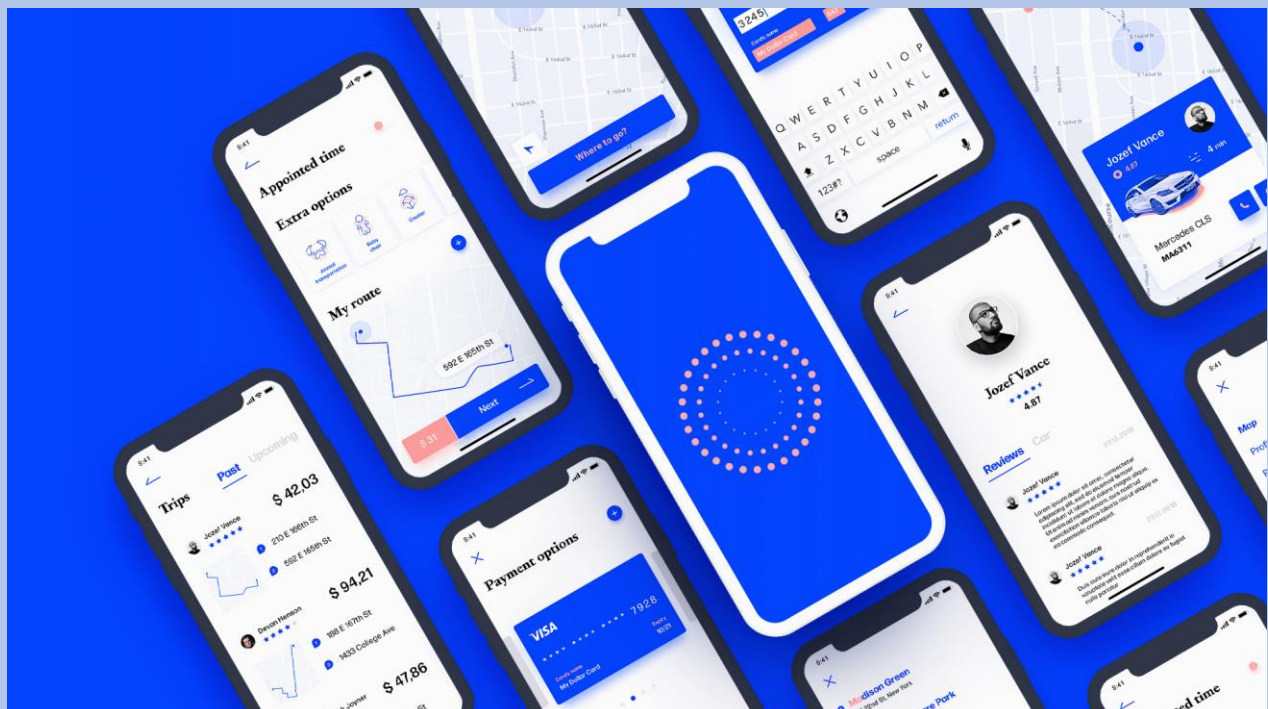

uptravel

Goals of making decentralized mobility services:-

- Drivers can get almost 80% of the total taxi fare.
- Taxi fares cost 23% lesser than the existing fares.
- Users get a variety of reasonable price quotes for their ride.
- No more surge fee and convenience fee.
- Crypto payments improve the speed and security of the transaction
