Web 3.0

Semantic Webs

Masood Ahmed Mohiuddin

"The wisdom of crowds has peaked. Web 3.0 is taking what we have built in Web 2.0 – the wisdom of the crowds and putting an editorial layer on it of truly talented, compensated people to make the product more trusted and refined." - Jason Calacanis

WEB.S

WEB.S stands for Web School (using web 3.0). It is a webpage that runs on decentralized network which potentially can be a massive course provider aimed at professionals and students.

Since Web 3.0 is built upon the core concepts of decentralization, openness, and greater user utility we can utilize this to the full potential.

Cloud services like Storj, Ethernity CLOUD which run on Decentralized systems can provide us much more safety and data protection.

Using decentralization, we can store courses and teaching data (using Ethereum network). Certificate can use NFTs for authentication.

Payment can be made through cryptocurrency, benefiting and encouraging teachers to move to this as they receive maximum revenue. Small amount of money would be taken for WEB.S community service and for the gas fees.

React for Designers

12 SECTIONS ▶ 6 HOURS Taught by Meng To

Learn how to build a modern site using React and the most efficient libraries to get your site/product online. Get familiar with Grid CSS, animations, interactions, dynamic data with Contentful and deploying your site with Netlify.
